

Aptpod Launches Critical IoT Platform "intdash" Available in AWS Marketplace

Aptpod, an industrial IoT platform provider, today announced that the Critical IoT platform middleware "intdash" will be available in Amazon Web Services (AWS) Marketplace. This will allow customers to try, buy, and deploy "intdash" through AWS Marketplace. intdash is a highly expandable industrial Digital Transformation (DX) system which will enable customers to create a data streaming pipeline for the IoT industry to build up a real-time bidirectional fusion data stream and scalable data processing environment. With intdash, IoT devices such as vehicles and robots can be easily interconnected.

"intdash" in AWS Marketplace allows quick deployment and integration with AWS's services such as Machine Learning on user's own Amazon EC2 environment. intdash AMI includes Visual M2M Data Visualizer web application for beautiful data visualization of your IoT connected devices.

About Aptpod:

A specialist in Industrial Critical IoT, Aptpod offers multi-layer products including hardware, embedded software, cloud technology, and user applications to realize industrial DX toward next generation.
